

**RISC Networks**<sup>TM</sup>

## **Application Questionnaire**

*December 3, 2015*  
*Version 1.1*

*Prepared By:*  
*Don Rosado, [drosado@riscnetworks.com](mailto:drosado@riscnetworks.com)*

## Overview

The purpose of this Application Questionnaire is to gather basic information about each application or application stack in use within the discovered environment. This information will add context to the discovery data and will be used by RISC Networks consultants during the application stack rationalization process. The following is a brief description of the requested information and its intended purpose.

### Application Name

The name of the application or application stack as it is most relevant to the business (i.e. business friendly name). These names will be used within the CloudScape platform to name the discovered application stacks so that they appear more relevant when using the portal. These names will also be reflected in the PDF report.

### Description

A brief description of the application and its use by the business. This information will be included as a descriptor for the application within the CloudScape platform and will be included with the application in the PDF report.

### Owner

The person primarily responsible for the application and knowledgeable on its architecture and system interdependencies. The application owners will be asked to work with RISC Networks to review and approve the application groupings within CloudScape.

### Owner Email and Phone Number

Contact information for the application owner. This information will be used to schedule application stack review sessions to finalize and approve application groupings.

### Known Servers

A list of any server(s) known to be included with the application or application stack. This information will help RISC Networks consultants locate the application within the RISC\_AutoGen application groups so we can associate the business friendly name with that group. This information will also help RISC Networks consultants evaluate observed system dependencies. If all of the systems included in an application stack are not known or not documented, then please provide the entry point of the application (i.e. front end web server) at a minimum.

## Application Information

Please fill out the following form for each major application or application stack in the discovered environment.

Note: As an alternative to providing the information in the form below you can provide the same information in a CSV file. The CSV file must include the following headers:

Name, Description, Owner, OwnerEmail, OwnerPhoneNumber, KnownServers

Application 1 (example provided)

<b>Name</b>	Medical Records
<b>Description</b>	Epic Acute Care EMR (Electronic Medical Records) used to maintain all patient information.
<b>Owner</b>	Jennifer Doe
<b>Owner Email</b>	<a href="mailto:Jdoe@customer.com">Jdoe@customer.com</a>
<b>Owner Phone Number</b>	312-867-5309
<b>Known Server(s)</b>	172.16.250.51, 172.16.250.52, 172.16.251.51, 172.16.251.52

Application 2

<b>Name</b>	
<b>Description</b>	
<b>Owner</b>	
<b>Owner Email</b>	
<b>Owner Phone Number</b>	
<b>Known Server(s)</b>
